We the people of Prince Edward Island petition the province of Prince Edward Island to have better resources for people suffering with the disease of addiction and mental health challenges . A mental health mobile crises unit team to provide intervention and short term crises management for children, youth, and adults experiencing a mental health or addiction crises. The team would be professionals , social workers , law enforcement officers, nurses, youth workers. This team would develop working relationships with the local police , physicians, nurses, and social program officers. We also petition for a Mental Health and addiction unit at the Queen Elizabeth Hospital . A unit where people would be assessed by trained experienced mental health physicians, and be connected to the appropriate services. It would offer 24/7 services. We have a Methadone maintenance program , there needs to be another option. The medication Suboxone which has a better safety profile and less side effects is one. Most people are on a low dose of Suboxone for two years then they are ready to complete their treatment . They are weaned off . You can not over dose on it. We have had a number of cases of people overdosing in the last month in our province. It's time to make a change in our health care system . Thank you for your support.
