Subject: Millvale Road

Dear Ms Biggar,

I understand that Maritime Electric and the Province are colluding in installing high-voltage power lines on the Millvale Road, with a new substation. This is due to increased development in Cavendish, Stanley Bridge and Hunter River, nothing to do with Millvale Rd. Millvale Road is one of the most picturesque roads In the Island – you should visit it before you pass such things, although the true beauty is not seen until Summer, Autumn. This plan would totally detract from this beautiful vista. There are also quite a few houses on the road, the occupants of which would then be subjected to the adverse affects caused by High EMF transmissions. ME obviously want it to go on a ready-made road to save them expense. However,at the same time, they are giving their investors huge rates of 9%, which everyone says is unconscionable. PLEASE, do the right thing, make them put the line across country, away from houses. You would not like an 18 metre pole with high EMF transmissions outside your house.

As a private company who need to upgrade to provide electricity to customers you should be speaking with Maritime Electric as it is their project.

I have spoken to them. I apologize. Hoped the Province would have helped out.. the customers to which they want to provide more electricity do not live in this area. Our area, rural, scenic, etc is being sacrificed for bigger developments, commercial enterprises, etc.

[] I suggest you do discuss with the Cavendish and Area Development Council as they also play a part in determining development plans for the region.
